PROFESSIONAL SUMMARY

Driven Computer Science student and Full-stack Developer specializing in Python, Java, and AI-driven automation with expertise in Prompt Engineering and building production-ready SaaS platforms featuring integrated voice and automation capabilities.

PROFESSIONAL EXPERIENCE

Technology Consultant (Simulation)	Deloitte Australia
Technology Job Simulation	Remote
- Engaged in comprehensive software analysis and technical problem-solving within a corporate consulting framework - Delivered innovative solutions addressing complex business challenges through technology-driven approaches - Collaborated with cross-functional teams to analyze system requirements and propose scalable solutions	

EDUCATION

Bachelor of Technology in Computer Science	August 2023 - June 2027
NIMS University, Jaipur, Rajasthan, India	

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript
Web Technologies: Next.js, PostgreSQL, Supabase, Web Development
AI and Automation: Prompt Engineering, Vertex AI, Voice Automation, LLM Workflows, Machine Learning
Payment Integration: Razorpay Multi-currency Processing
Core Competencies: Full-stack Development, AI Python Development, ML Engineering, SaaS Platform Development

PROJECTS

Snippets Factory - AI-Powered Code Management SaaS
- Developed production-ready SaaS platform utilizing Next.js 16 and Supabase for enterprise-grade snippet organization - Integrated Razorpay for multi-currency payment processing and automated subscription management systems - Implemented AI-powered search and sharing functionalities optimizing developer workflows and productivity
FlowCoach - Multi-tenant CRM Platform
- Built comprehensive CRM solution for coaching businesses featuring advanced Role-Based Access Control system - Engineered complex automation workflows and full payment integration via Razorpay gateway - Designed scalable multi-tenant architecture supporting concurrent business operations
LinkedAI - AI Content Scheduler
- Architected SaaS platform for LinkedIn content strategy featuring AI-driven content creation and automated scheduling - Developed analytics modules tracking engagement metrics and optimizing content performance - Implemented intelligent scheduling algorithms maximizing audience reach and interaction rates
Defence Engine - High-Performance Security System

- Designed advanced protection system utilizing quantum-inspired hashing and AI-powered threat detection
- Implemented real-time hash generation capabilities for ultra-high-performance security environments
- Developed automated threat response mechanisms ensuring system integrity and data protection

CERTIFICATIONS

Master in Prompt Engineering and AI
Prompt Design in Vertex AI Skill Badge
Deloitte Australia - Technology Job Simulation
